Professional Summary

Full Stack Software Engineer with 3+ years building enterprise and government-facing platforms, spanning React.js/Redux/TypeScript front ends and Python (Django, Flask) back ends. Experienced across GCP-native services (Cloud Run, Firestore, BigQuery, Cloud Storage) and AWS, with hands-on work on REST API design, GenAI-integrated modules (Vertex AI/Gemini), and computer vision (YOLO) features for a large-scale government tax platform and several other production applications. Skilled in taking products from UX and data modeling through to scalable backend logic and cloud deployment pipelines (CI/CD on Cloud Build).

Technical Skills

Languages: JavaScript, TypeScript, React, Python, SQL

Frontend Frameworks/Libraries: React.js, Redux.js, Tailwind CSS, Vite

Backend Frameworks: Django, Django Rest Framework, Flask

Cloud Technologies: GCP (Compute Engine, App Engine, Cloud Build, Cloud Functions, Cloud Storage, Cloud Run, Firestore, BigQuery), AWS (S3, Lambda, EC2, CloudFront, Code Build)

AI/ML & GenAI: Vertex AI (Gemini), YOLO Ultralytics, Computer Vision

Developer Tools: Git, GitHub, Bit Bucket, Postman, Docker, VS Code, MySQL Workbench, PSpice, Tableau Desktop, Arduino, AutoCAD, Anaconda

Operating System: Windows, Unix/Linux

Professional Experience

Valiance Solutions

Sep 2023 – Present

Software Engineer

Noida, Uttar Pradesh

GST LLM Project | React JS, Python (Django, Flask), GenAI (Vertex AI/Gemini), Google Cloud Platform

- Built full-stack modules for the AP GST Scrutiny & Assessment Platform (APCTD's Vertex AI-powered Tax Officer Solution), owning both the React JS frontend (Scrutiny, Audit, and Inspection workflows — ASMT-10 notices, Annexure worksheets, PDF/DOCX handling) and the Flask/Django REST API backend powering it.
- Developed backend APIs serving 17+ GST discrepancy tables with multi-level header/grouping logic and parallel query execution, and integrated Vertex AI (Gemini)-driven case discrepancy explanations and notice drafting into editable, JSON-driven UI structures.
- Implemented PDF annexure generation (ReportLab), DOCX-to-PDF conversion, Firestore-based document versioning, GCS storage with signed URLs, and JWT-secured endpoints; deployed on Cloud Run with Cloud Build CI/CD.

Civic Eye | React TypeScript, Python Django, Google Cloud Platform, YOLO Ultralytics, Tailwind CSS, Google App Engine, CI/CD (Google Cloud Build), SQL, AI/ML

- Led end-to-end full-stack development of Civic Eye — React TypeScript frontend and Python Django backend — enabling real-time incident tracking and public safety enforcement, with GCP deployment and UIs optimized for rapid situational awareness.
- Implemented live video feed detection using a fine-tuned YOLO Ultralytics model trained on a custom pothole dataset from Indian roads to identify hazards and on-road violations with high precision. Added real-time alerts, GPS-assisted incident localization, and incident record flows to accelerate dispatch decisions and strengthen accountability.
- Deployed on Google App Engine with Cloud Build pipelines for automated testing and continuous delivery on GCP.

ForeSight | React JS, Redux, Tailwind CSS, Google Cloud Storage, Python, Django, SQL

- Developed and implemented the frontend of the ForeSight SAAS application, enhancing user experience with intuitive, user-friendly dashboards for advanced sales demand forecasting.
- Collaborated with the backend team to ensure seamless integration of customer data, resulting in precise and actionable sales predictions. Implemented robust state management using React-Redux, ensuring seamless data flow and interaction within the application, while integrating essential APIs to facilitate real-time support and information retrieval for users.
- Successfully deployed the ForeSight application to Google Cloud Storage, ensuring scalability and reliable access for users.

Countify | React JS, Django, Tailwind CSS, AI/ML, Computer Vision, SQL

- Delivered a web application that analyzes live video feeds to count and track movement of stock items—such as goods and carton boxes—across warehouses, distributors, and customers.
- Reduced manual errors and improved inventory accuracy through automated tracking, enabling faster reconciliations

and fewer stock discrepancies.

- Strengthened supply chain visibility by turning camera streams into actionable telemetry for operations and planning teams.

Techsagar (Client-DSCI) | Python, Scrapy, AWS, Elastic Beanstalk, Cloudfront, React, S3, Redux

- Collaborated with a team to successfully complete all project tasks. Worked on the frontend development using React to create a dynamic and responsive user interface.
- Implemented design and functionality based on project requirements and user feedback. Ensured code quality and maintainability through best practices and thorough testing.
- Worked on deployment tasks, configuring the development environment on Elastic Beanstalk and deploying the production environment on CloudFront.
- Implemented a web data scraping automation process to efficiently gather and structure online information. Developed a Python-based web scraping solution using the Scrapy framework, showcasing expertise in data extraction from various web sources.
- Demonstrated the ability to automate data retrieval, saving time and effort when dealing with large volumes of online data. Configured Scrapy pipelines to process and store scraped data in MongoDB, ensuring data integrity and consistency.
- Developed deployment scripts to automate the deployment process, pushing data from development to staging and production environments.

HighRadius

Jan 2022 – Apr 2022

Software Engineer Intern

Hyderabad

- Successfully developed and deployed an AI-enabled Fintech B2B Cloud Application, leading full-stack web-based product creation. Expertise includes user requirement analysis, UX design, data and machine learning model development, UI, and backend implementation. Proficient in Machine Learning, Pandas, SQL, Python, NumPy, and Eclipse for delivering innovative Fintech solutions.
- Acquired comprehensive insights into product development, equipped with skills for user-friendly solutions in the Fintech sector. Demonstrated ability to construct exceptional user experiences, design relevant data models, and implement UI components.

Sahara Next

Aug 2021 – Sep 2021

Information Technology Trainee

Lucknow

- Implemented two main projects: “HTML and CSS Validation for Websites” and “Creating a Machine Learning-Based Chatbot Using Python.” Evaluated website compliance and standards adherence through HTML/CSS Validation project.
- Developed a Python-based chatbot leveraging machine learning techniques to enhance user interaction and provide automated assistance. Skills include HTML/CSS Validation, Machine Learning, Chatter Bot, Python, Tkinter, and Natural Language Processing (NLP). Demonstrated proficiency in assessing website compliance and building interactive chatbots for improved user experience.

Publications

Image Segmentation Using the R-CNN Architecture

May 2023

International Journal of Creative Research Thoughts – IJCRT

- This paper focuses on the project titled “Image Segmentation Using the R-CNN Architecture,” which has applications in various fields such as scene understanding, medical image analysis, robotic perception, video surveillance, augmented reality, and image compression.
- The primary focus of this project is on computer vision and image processing, with image segmentation being a central topic.

Certifications

- [GCP Cloud Architect – Professional](#)
- [GCP Cloud Developer](#)
- [Accenture Nordics – Developer Virtual Experience Program](#)
- [Mindsweeper Uttar Pradesh Zonals](#) | Cognizance 2021, IIT Roorkee
- [KODATION](#) (Coding Competition organised by GeeksforGeeks)
- [Cloud Computing Workshop \(Cloud Net\)](#), My Equation (formerly TechAnalogy)

Education

B.Tech, Computer Science & Engineering

July 2019 – July 2023 | CGPA: 9.14

SRM Institute of Science & Technology, Chennai
